

LIVE WORKSHOP · 2.5 HOURS

CLAUDE FOR EVERYONE

Build real things by describing them. No code required.

What if you could just describe it, and it gets built?

No syntax. No setup rabbit holes. You talk; Claude works in real files.

An AI agent that works on your computer

Works in real files

not just chat, actual files

Builds anything

decks, sites, video, docs

Connects your tools

Drive, Slack, GitHub & more

You stay in control

it asks before it acts

Describe what you want, it plans, writes files, runs things, you refine.

HOW IT WORKS

One agent, plugged into everything

The agent talks to your files, your tools, packaged skills, and MCP connectors.

— WHERE YOU USE IT

Same Claude, everywhere you work

Desktop app

easiest, start here

Terminal (CLI)

the power-user door

VS Code / IDE

inline diffs & edits

Web & mobile

kick off from anywhere

Tonight we lead with the desktop app. No terminal required.

— TONIGHT

FIVE THINGS WE'LL BUILD

Each one is the same loop. Once you feel it, you have it forever.

— THE PLAN

Your next 2.5 hours

1

Set up Claude Code

desktop app or CLI, we'll do it together

2

Make a presentation

plain prompt, skills, my custom plugin, Gamma

3

Build a portfolio site

drop a resume, get a live URL to share

4

Create an animated video

HyperFrames: describe scenes, get motion

5

Connect your world

Google Drive & other connectors via MCP

— BEFORE WE START

What you need tonight

A Claude account

Pro or Max unlocks skills & plugins

claude.ai

Claude Code installed

the desktop app (easiest) or the CLI

free with plan

A free GitHub account

to publish your portfolio & sites live

github.com

About 10 minutes

set these up before the session if you can

pre-work

Only the GitHub account needs doing ahead of time. We'll set up Claude Code together.

— PART ONE

SET UP CLAUDE CODE

Two doors in. Pick whichever feels comfortable.

Two ways to start

claude · zsh

Option A. Desktop app: download, sign in, open the Code tab.

Option B. Terminal (CLI):

```
$ npm install -g @anthropic-ai/claude-code
```

```
$ cd my-project
```

```
$ claude
```

✓ Signed in. Try: "make me a to-do list as a file"

A Pro or Max plan unlocks skills & plugins. We'll use those tonight.

Your first win: a real file, from one sentence.

"make me a to-do list as a file". Watch it create something real.

— PART TWO

MAKE A PRESENTATION

From a plain prompt to a cinematic deck, in three iterations.

Watch the same deck level up

+ Gamma · the 2-minute browser alternative

Each step adds power, but it's always the same loop underneath.

Just ask: a plain prompt

● YOU TYPE

Make me an 8-slide investor pitch deck for a neighborhood coffee shop. Save it as a PowerPoint file.

You get a real .pptx in seconds. Functional, but flat. Now we level it up.

A deck is just sections. Name them.

● YOU TYPE

Make a pitch deck with these slides: 1) title, 2) the problem, 3) our solution, 4) how it works, 5) the market, 6) traction, 7) the team, 8) the ask. Audience: investors. Save as PowerPoint.

The secret beginners miss: list the sections you want. Claude fills each one.

When it looks wrong, say this

Too crowded

"Max 4 bullets per slide, one idea each."

Looks boring

"Use a bold palette and one image on every slide."

Hard to read

"Bigger titles, stronger title-to-body contrast."

Text cut off

"Render the slides as images and fix the overflow."

Every slide same

"Vary layouts: two-column, big quote, stat grid."

Numbers buried

"Turn the stats into a chart."

You never edit slides. You name what you see, in plain words. Claude fixes it.

Make Claude grade its own deck

● YOU TYPE

Rate this deck out of 10 on clutter, structure, color, type hierarchy, imagery, layout variety, data, headlines, polish, and format. Fix anything that scores under 8.

A self-scorecard finds the weak slides for you, then fixes them. Watch it judge its own work.

Skills & plugins = packaged workflows

A skill

a repeatable recipe Claude follows

A plugin

a bundle you install once

How to add

/plugin marketplace add ...

Someone packaged the back-and-forth so you don't have to remember the words.

Two skills that do the design for you

pptx (official)

real editable deck + self-QA

frontend-slides

pick a style, get a live URL

Share anywhere

open it on your phone

It even renders its own slides as images and fixes overflow before finishing.

PitchCraft: the plugin I built

claude · zsh

```
# Install my plugin once:
```

```
$ /plugin marketplace add fnusatvik07/pitchcraft
```

```
# Then build a cinematic deck from a topic or a URL:
```

```
$ /deck "the economics of a coffee shop"
```

```
✓ Story-first slides, real diagrams, citations, self-checks
```

This is the ceiling: story-first cinematic decks, fully automated.

Claude Code vs. Gamma: when to use which

Need a decent deck in 2 minutes, in a browser?

GAMMA

Want to own the file, keep refining, do more than decks?

CLAUDE CODE

Want the cinematic ceiling or a repeatable workflow?

A SKILL

Gamma is a separate web app, great for speed. Claude Code does decks AND everything else.

— PART THREE

PORTFOLIO FROM A RESUME

Drop a PDF, get a live personal website, in minutes.

Resume in, live website out

Claude reads the PDF itself, no copy-paste. Swap the file, run again, a new site for anyone.

Three steps to a live site

```
claude · zsh

# 1. Add my portfolio plugin (one time):
$ /plugin marketplace add fnusatvik07/portfolio-pro-plugin
$ /plugin install portfolio-pro@claude4everyone

# 2. Drop your resume PDF in the folder, then run:
$ /portfolio

✓ It reads the PDF, confirms your details, and builds the site
```

I built this plugin so the design is fixed and the result is consistent every time.

— MAKE IT YOURS

What you can control

Theme

light, dark, or auto

`--theme`

Accent color

any preset, or your brand hex

`--accent`

Font

clean, serif, or grotesk

`--font`

Your photo

from the PDF, GitHub, or dropped in

`auto`

Sections

projects, skills, experience...

`from resume`

Live URL

deployed to GitHub Pages

`deploy`

Same loop again: ask for a darker theme, a warmer accent, a serif font, and it rebuilds.

Deploy to a real URL

You approve every deploy. Claude never publishes a public site without your go-ahead.

— PART FOUR

AN ANIMATED VIDEO

HyperFrames turns a description into a real explainer, narration and all.

Just describe the video you want

● YOU TYPE

Make a 30-second explainer about how an ETL data pipeline works, using a retail cloud-migration example. Cover extract, transform, load, batch vs streaming, and data lake to warehouse. Databricks style, with narration.

Name the topic, the length, the example, the style, and ask for narration. That's the whole prompt.

From words to a finished video

The video is just HTML and an animation timeline. Claude writes it, then renders every frame.

WHAT YOU CAN CONTROL

Everything a real editor controls

Scenes & motion

GSAP timelines, entrances, transitions

built in

Narration

text-to-speech voiceover

tts

Captions

synced word by word

auto

Music & audio

tracks, volume, ducking

built in

Audio-reactive

glow & pulse on the beat

built in

Effects

3D, shaders, Lottie, charts

libraries

Add a voiceover, captions, music, and motion, all by describing them.

DATA ENGINEERING · FIELD GUIDE

ETL

EXTRACT

TRANSFORM

LOAD

The pipeline behind every cloud data migration.

SOURCES

LAKE

LAKEHOUSE

WAREHOUSE

— REAL OUTPUT

Frames from the ETL explainer

Title · Extract Transform Load

Batch vs streaming

Source to warehouse

This 30-second Databricks-style explainer was generated with HyperFrames, narration and all.

Watch it back, then say what to fix

Too fast

"Slow scene 2 down and hold the title longer."

Feels flat

"Add a crossfade between scenes and stagger the entrances."

Needs a voice

"Add narration with this script, and sync captions to it."

Silent

"Add soft background music at 30%, duck it under the voice."

Text cut off

"Run inspect and fix the overflow on that card."

Off brand

"Use these colors and this font across every scene."

Same loop as the deck: you describe the fix in plain words, Claude re-renders.

— PART FIVE

CONNECT YOUR WORLD

Let Claude reach your own data, safely, with your permission.

Chat with your own files & tools

Drive

Slack

GitHub

Notion

Gmail

Connectors run on MCP, the open standard that lets Claude use your tools.

— TAKE THIS HOME

YOUR STARTER TOOLKIT

The exact skills, plugins, and connectors to install first.

One place to browse everything

Run `/plugin` inside Claude Code, or browse at claude.com/plugins. Every plugin shows its install count and an Anthropic-verified badge.

Best skills to start with

pptx

beautiful slide decks

[anthropics/skills](#)

docx · xlsx · pdf

documents & spreadsheets

[anthropics/skills](#)

frontend-design

stunning websites · 907k installs

[claude.com/plugins](#)

frontend-slides

web decks + a live URL

[zarazhangrui/...](#)

PitchCraft

cinematic decks (mine)

[fnusatvik07/pitchcraft](#)

Skill Creator

build your own skill

[claude.com/plugins](#)

Install a skill once, then just mention it. Start with documents and design.

Best plugins & connectors to add

GitHub

your code & pull requests

`github@official`

Notion

your notes & docs

`notion@official`

Slack

your team messages

`slack@official`

Google Drive

your files & folders

`MCP connector`

Figma

your designs

`figma@official`

deep-research

cited research reports

`community`

Official connectors install in one line from the built-in claude-plugins-official marketplace.

OFFICIAL SKILLS

Where the official skills live

pptx, docx, xlsx, pdf and many more. Add the whole set once with /plugin marketplace add anthropics/skills

Three commands, the whole system

```
claude · zsh

# 1. Add a marketplace (one time):
$ /plugin marketplace add anthropics/skills

# 2. Install what you want:
$ /plugin install document-skills@anthropic-agent-skills

# 3. Browse & manage everything:
$ /plugin

✓ Official directory is built in: /plugin install github@claude-plugins-official
```

Add, install, browse. That's the entire plugin system.

— WHERE TO FIND MORE

The best places to discover skills & MCPs

Official skills

pptx, docx, design & more

github.com/anthropics/skills

Official plugins

verified, one-click install

claude.com/plugins

Community plugins

screened third-party

[claude-plugins-community](https://claude-plugins-community.com)

Awesome Claude Skills

huge curated catalog

awesome-skills.com

MCP registry

the official server registry

modelcontextprotocol.io

MCP directories

thousands of servers

glama.ai • mcp.so • [smithery](https://smithery.ai)

Official first for safety. Community catalogs for breadth. Always check a plugin before installing.

Thousands of skills, one directory

Community directories like awesome-skills.com catalog and rate skills across every category.

Describe. Look. Refine.

Every build tonight was this one loop. Learn it once, use it forever.

— WHAT NOW

Keep building after tonight

Reuse the skills

swap inputs, run again

Save the cheatsheet

the words that fix anything

Explore the toolkit

/plugin marketplace add ...

Bring your own data

connect Drive & more

You already know the whole game. Now point it at your own work.

Now, let's build.

Thank you. You'll leave with a deck, a portfolio site, and the loop in your hands.
